

from the project root
(/mnt/c/Users/Hp/Desktop/Online_Examination):

docker compose up --build -d

This builds & starts all 7 containers in detached mode:

- 3 exam nodes (:3001, :3002, :3003)
- Redis (sessions/timers)
- PostgreSQL (exams/results)
- Nginx (load balancer on port 80)
- React client (frontend)

Then access: <http://localhost>

Login: student1 / test123

To stop:

docker compose down

To see logs:

docker compose logs -f

To rebuild after changes:

docker compose up --build -d

then restart nginx so it picks up new node IPs:

docker compose restart nginx
